

Offset Reamer Driver

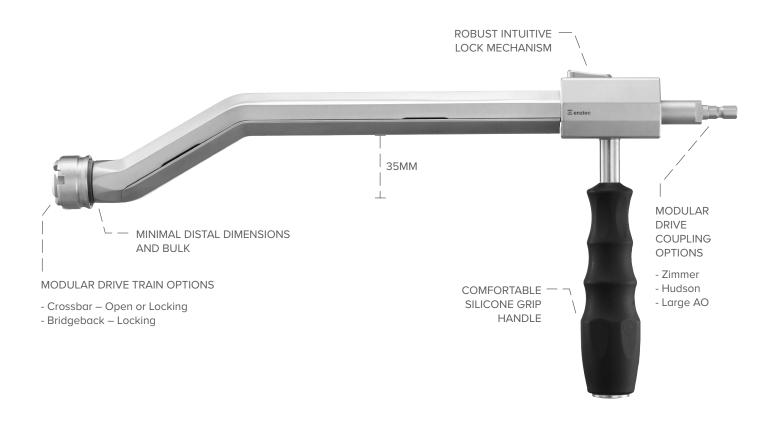

Providing superior visibility and control while reaming.

The Enztec Offset Reamer Driver is available with two types of acetabular reamer capture: locking or open.

The locking option allows reverse reaming if bone chips are to be compressed for defect filling in the acetabulum during bone grafting. The open option allows the user to (dis)connect the reamer driver to the acetabular reamer in situ.

With a variety of configurations available, there is an Enztec Offset Reamer Driver to support your minimally invasive technique.

Features

- Two reamer captures:
 - Locking Allows bone grafting while reverse reaming
 - Open Allows in-situ reamer attachment
- Intuitive assembly and simple disassembly for cleaning
- Replaceable parts
- Easy intraoperative adjustment of the handle
- Compatible with Crossbar or Bridgeback reamers

Specifications

- Materials: Stainless Steel, Silicone, PEEK
- Weight: 925g / 2.0lbs
- Length: 360mm / 14.2in
- Offset: 35mm / 1.4in
- Add your logo: available
